

# APOCONNECT

## APOCONNECT: general

APOCONNECT is a system for the telemonitoring and remote diagnosis of UPS systems.

The UPS system is equipped with a modem which is appropriately configured by Piller Service. Connection is made via a telephone line to a central computer in the Service Support Department of Piller Power Systems. In the event of a fault, the contents of the UPS event memory are transmitted by email to the duty engineer.

Data protection is ensured at all times by comprehensive security settings.

## Features:

- Uses standard interfaces and protocols
- Monitors any number of UPS systems
- Stores the history / log file
- Sends a notification to Piller Service via email / SMS
- Worldwide transmission capability
- Enables telemonitoring, fault diagnosis and telemaintenance.
