

DATAWATCH

DATAWATCH: general

Datawatch provides central monitoring, control and operating data capture for UPS systems. All UPS status information, such as input voltage, battery capacity, etc., is clearly displayed. The main function of Datawatch is to monitor UPS systems and to control the orderly shutdown of individual workstation computers and entire systems.

Features

- Use of standard interfaces and protocols
- Prompt, targeted shutdown prevents data loss
- Monitoring of several systems through extended licences
- Stores history / log file
- Sends a notification via Email / SMS
- Worldwide transmission capability
- Enables telemonitoring
- Monitoring of parallel and stand-alone UPS systems
- Clear display of all UPS status information
- Suitable for Windows, OS/2, Novell Netware, Unix, VMS and Macintosh platforms
- A licence is required for each server / workstation computer
