SNMP-Adapter

SNMP adapter: general

The SNMP adapter is the interface between a network connection (Ethernet) and the UPS system to enable it to be managed.
In addition to the SNMP agent, a WEB server and an Email client are built in. The UPS system can be easily monitored and managed with these standard tools.
The SNMP adapter also supports the Modbus protocol and can directly connect the UPS system into a buildings services management system via the network.

Features

- Connection to networks (Ethernet)

- Simple remote visualisation via Web browser

- Worldwide communications capability

- Small footprint

- Enables telemonitoring

- 2 serial RS-232 interfaces

- Modem support for UPS dialler and Internet connection

- Available as SLOT and stand-alone variants
